Subject: Dissolving time

Dear Ladies and Gentlemen, 14.02.2023

Thank you very much for your interest in our products and your related commitment in sales.

Your question in regards to "**dissolving time**" we would like to answer as following:

Unfortunately, there is no German / European Norm concerning "**dissolving time for hygiene papers**" available. Up to today, WEPA (and several of its competitors) rely on the French standard **NF Q34-020** which stipulates that a toilet paper must dissolve within 30 seconds. In this aspect we would like to ensure you, that all various qualities of our toilet paper have been tested at the WEPA Lille site (France) in accordance to this norm. This includes products from all various product families like recycling, pulp and hybrid, in 2, 3 and 4 layers.
The test was always successful! – All toilet papers of WEPA dissolve in less than 30 seconds.

We hope that we could answer your question professionally.

Good luck with this statement and kind regards

i. V.
